

Carousels: High Reward, High Effort

LinkedIn carousels get the most engagement, but designing each slide manually is a grind. Posta automates the boring parts so you can focus on your message.

Dwell Time Drives Reach

A carousel breaks one idea into swipes, so readers spend more time on your post. The feed rewards that attention. Remove the design friction and carousels become your default format.

AI + Posta = Automated Pipeline

An LLM turns your article into punchy slides. A fast image model creates on-brand backgrounds. Posta composites readable text and stitches everything into a ready-to-post LinkedIn PDF—all in one API call.

One API Call, Many Options

With Posta, generating a carousel is a single REST API request. Or use the n8n community node for no-code workflows. The Claude Code skill even lets you prompt your way to a PDF. Fit it into any automation stack.

Start Your 14-Day Free Trial

Carousels stop being a chore when rendering is one API call away. Wire up your pipeline — no credit card needed. Visit getposta.app to begin.
